DETAILED ACTION

1. Drawings were received on 8/27/03 (And due to imaging problems the examiner requested a copy of documents filed on 8/27/03. These copies were received on 11/4/03). These drawings are acceptable.

2. The amendment received on 8/27/03 has been entered into the file. In addition, due to imaging problems Examiner requested a copy of the amendment. This copy was received on 11/4/03.

Claim Objections

3. Claim 8 is objected to for the following: the term, "the detection lights," of lines 5 and 6 lacks antecedent basis. Correction is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. **Claims 1, 6, 7, and 11** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Suzuki et al. (5,365,051)**.

As for **claims 1 and 7**, Suzuki in a projection exposure apparatus discloses the following: a position detection optical system, a TTL alignment system, which detects a position of a mark formed on a street line of a substrate; and a focus detection system which irradiates a detection light to the substrate, and which detects deviation between an irradiated region and a focus plane of the projection lens by detecting a reflected light, the light being irradiated on a region of said

Art Unit: 2877

street line which is different from a region on which said mark is formed (Figs. 1, 2, 4a, 4b; col. 2, lines 20-45; col. 3, lines 55-65; col. 4, lines 5-20 and lines 53-67). In addition, the irradiation may be done before detecting a position of the mark by the alignment system (col. 9, lines 40-67). As for focal plane of the position detection optical system, Suzuki states the focal plane of the projection lens (col. 2, lines 20-45; col. 4, lines 3-8). However, the TTL alignment system detects marks through the projection lens (Fig. 1, col. 3, lines 55-60). Therefore, it would be obvious to one skilled in the art at the time the invention was made that the deviation was between the irradiated region and a focus plane of the position detection optical system, for the deviation was between the irradiated region and a focus plane of the projection lens which comprises the alignment system.

As for **claims 6 and 11**, Suzuki discloses everything as above (see claims 1 and 7). In addition, Suzuki discloses a pattern area to be transferred being exposed onto a substrate (col. 3, lines 40-50; col. 4, lines 20-25) aligned by the alignment apparatus of claim 1 (see claim 1 above); alignment is performed as in claim 7 (see claim 7 above) and subsequently the substrate is exposed (col. 9, lines 40-67).

Response to Arguments

6. Applicant's remarks with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection. However, due to applicant's amending of the claims, the rejection of the claims 1-11 under 35 U.S.C. 112 second paragraph has been withdrawn.

Allowable Subject Matter

7. **Claims 2-5, 8-10** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

As to **claim 2**, the prior art of record, taken alone or in combination, fails to disclose or render obvious in an alignment apparatus a focus detection system comprises a first detection system using a first detection light along said first direction and a second detection system using a second detection light extending along said second direction, in combination with the rest of the limitations of **claims 2-5**.

As to **claims 8-10**, the prior art of record, taken alone or in combination, fails to disclose or render obvious in an alignment method a first detection light extending along said first direction and a second detection light extending along said second direction are irradiated as said detection light, in combination with the rest of the limitations of **claims 8-10**.

Fax/Telephone Numbers
